

EMERGENCY RESPONSE & MECHANICAL/ELECTRICAL INSTALLATIONS

We are an elite, rapid-deployment technical task force. Born in the high-stakes, zero-margin event industry, we have transferred our brutal discipline, speed, and structural expertise to heavy industry and infrastructure. We deploy self-sufficient, highly disciplined teams to secure your project timelines when local subcontractors fail.

ACTIVE WORKFORCE

100% IN-HOUSE

A1 & EU COMPLIANCE

0% DELAY

EVENT-GRADE TARGET

CORE CAPABILITIES

- Mechanical Installation:** Precision assembly of turnkey production lines, automated industrial systems, and heavy machinery components.
- Structural Steel & Frameworks:** Advanced assembly of high-load modular structures, multi-level overhead cable trays, and complex scaffolding (Layher standard).
- Industrial Electrics & Automation:** Comprehensive routing of heavy cabling, electrical connections (SEP standard), and sensor/automation integration.
- High-Access Operations:** Industrial rope access (IRATA), complex overhead rigging, and structural lift installations under strict safety conditions.

THE UNCOMPROMISING ADVANTAGE

- Event-Grade Punctuality:** Our DNA is built on zero tolerance for delays. We operate seamlessly where a 1-hour delay costs millions in liquidation damages.
- Zero-Friction Cross-Border Logistics:** We handle 100% of the compliance. Our in-house legal division processes A1 forms, local posting declarations (Zollamt, SOKA-BAU), transport, and accommodation.
- Elite Verified Workforce:** We do not use unverified agency workers. 100% of our grid consists of long-term professionals with mandatory EU certifications (IRATA, UDT, IPAF, SEP).

STRATEGIC VERTICALS & MARKET TARGET

DATA CENTERS	TURNKEY PRODUCTION LINES	RENEWABLE ENERGY	INTRALOGISTICS
Installation of multi-level cable trays , complex overhead support steel structures, cooling system piping, and high-altitude structured cabling networks.	Assembly and precise positioning of Automotive Gigafactories , automated laser cutting lines, heavy pressing systems, and coating lines.	Certified rope access technicians (IRATA) for internal/external wind turbine maintenance, blade repairs, and heavy industrial solar farms.	Full mechanical deployment of high-bay racking, ASRS systems , high-speed conveyor networks, and complex automated sorting lines.
